

iENDURANCE

THE SIGNIFICANCE OF ENDURANCE TESTING

The durability, sustainability and stability of automated equipment in container terminals across the globe is critical, any failure will influence the terminal productivity, profitability and optimal usage on day-to-day operations.

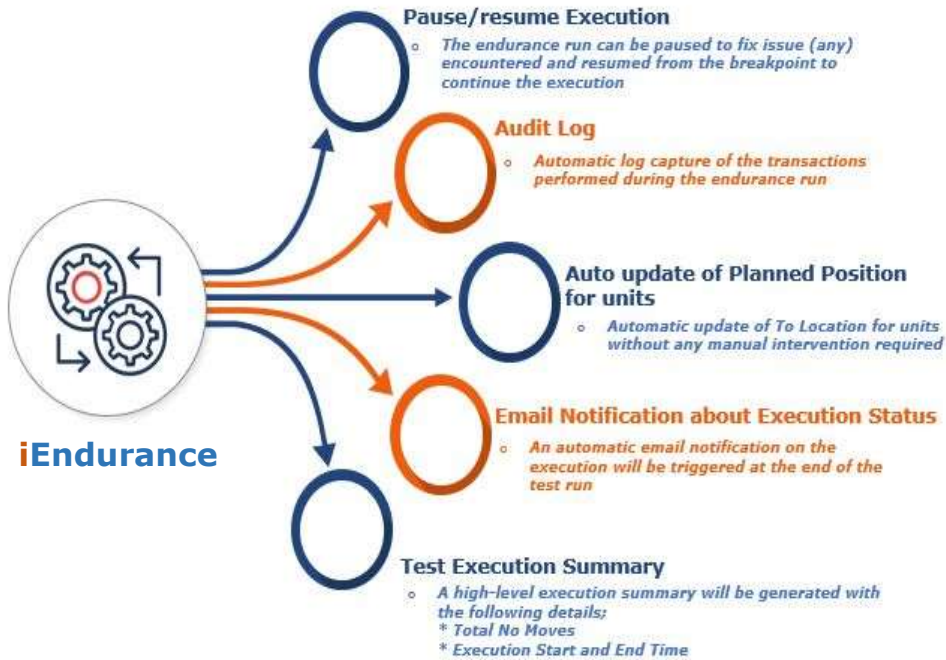

All container handling equipment(s) are designed and commissioned for 24x7x365 operations. The endurance test is to validate the design parameters correlating with business functions to find **Mean time between failures** (MTBF) and fault tolerance. For this reason, the equipment must be subjected to continuous operational tests for a long duration thereby ensuring the equipment's build quality. To assist with this testing and commissioning IGO has built iEndurance.

OUR EXPERTISE

iEndurance, is one of IGO Solutions flagship product, designed to simplify the testing and commissioning ASCs and Horizontal Transports (Auto-Straddles & Autonomous Trucks) which are integral and critical component of any automated terminal.

KEY FEATURES

We provide two flavours of iEndurance:

- Integrated with TOS (job orders generated from TOS and automatically send to Equipment(s))
- Exclusive with ECS (not integrated with TOS, job orders are directly sent from ECS)
